It can take up to 72 hours for new domains to be accessible everywhere!

This is caused by DNS caching, which InfinityFree cannot control, but there are some workarounds you can try. [Learn more.](#)

What is FTP?

FTP, short for File Transfer Protocol, is the standard way to upload and download files from web hosting accounts.

To use FTP, you'll need an FTP client. We recommend [FileZilla](#), the most popular FTP client available for Windows, MacOS and Linux. But you're free to use whatever FTP client you want, or use the FTP publishing capabilities of your website building software.

If you don't know how to use FTP, please see the article [How to upload files with FTP.](#)

Are you having trouble setting up an FTP connection? Please see the article [Help, I cannot connect to FTP.](#)
